About us

Extruder Shop was founded to provide Maintenance Managers with a quick, economical and easy way to resolve their needs for extruder wear components, reconditioned extruders and laboratory extruders.

No need to spend hours ploughing through the internet and making endless telephone calls. We are European agents for two of the best extrusion component specialists in the business, Cignys of Saginaw, Michigan and CFAM technologies (Pty) Ltd, of Potchefstroom, South Africa.

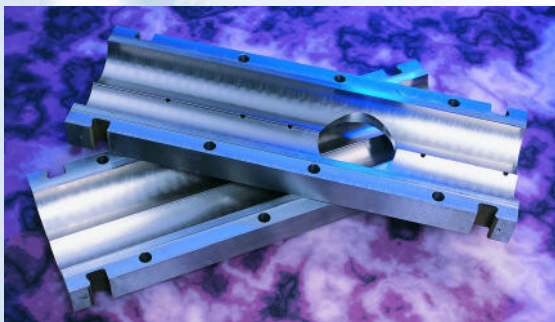

Feedscrews

We can provide top quality feedscrews to fit many twin and single screw extruders, together with expert advice on the best screw materials for your application

Barrels

Barrels and barrel liners are available for all twin screw extruders and small singles. We provide components in a range of materials, from nitrided steels at one end of the cost spectrum through hardened tool-steels and on to powder technology coatings at the other. For the ultimate in wear and corrosion resistance we can supply Sagittite solid or coated components.

Shafts

Shafts are one of our speciality areas and can be supplied for almost any machine, from the smallest to the largest. We can manufacture any configuration, splined hex or keyed, and can supply appropriate coatings or hardening regimes as required.

Feeder screws

Replacement screws are available for a wide range of extruder feeders or side-feeders.

Extruders

At the request of Powder coating customers CFAM Technologies has developed a simple, easy to clean laboratory extruder which comes complete with a compact, free-standing chill-roller and kibbler unit. With a favourable exchange rate these extruders are available to European customers at unbeatable prices.

The compact chill-roller/kibbler units are also available to fit any size of machine. Suitable chiller units and tanks can be supplied.

CFAM Technologies also manufacture an excellent and affordable 50mm twinscrew extruder suitable for compounding or the production of powder coatings, snacks or petfoods.

Full or partial extruder overhauls can be carried out in-house or at CFAM Technology's premises.
